

SAY GOODBYE TO
STUBBORN FAT

for good

Freeze and eliminate treated fat cells
permanently with CoolSculpting®

IT TAKES
TWO 

MANY PATIENTS MAY NEED 2+ TREATMENT VISITS
TO REACH THEIR DESIRED RESULTS.

Uses

CoolSculpting® and **CoolSculpting® Elite** are FDA-cleared for the treatment of visible fat bulges in the submental (under the chin) and submandibular (under the jawline) areas, thigh, abdomen, and flank, along with bra fat, back fat, underneath the buttocks (also known as banana roll), and upper arm. It is also FDA-cleared to affect the appearance of lax tissue with submental

AFTER TWO VISITS, PATIENTS SAW UP TO

73% *greater fat reduction*

THAN AFTER THE FIRST VISIT^{1,*}

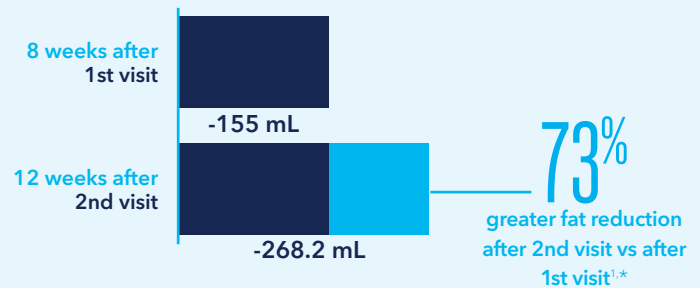

Losing stubborn body fat isn't easy. Fortunately, CoolSculpting[®] was designed to **freeze and eliminate treated fat forever.**

If you follow your personalized treatment plan, you could achieve the results you desire.

Mean Fat Volume Loss From the Start of the Study^{1,*}

*In a study, 106 patients received CoolSculpting treatments on the abdomen and/or love handles. 102 received two treatment visits and 4 received one treatment visit. The primary goal was to evaluate patient satisfaction. The secondary goal was to measure the change in fat volume from the start of the study to a certain timepoint after each treatment visit. Volume of fat was measured at day zero, 8 weeks after the first treatment visit, and 12 weeks after the second treatment visit. After the study was completed, calculations were done using the fat volume data of the patients who received two treatment visits. Change in fat reduction was compared at each timepoint.¹

Important Safety Information

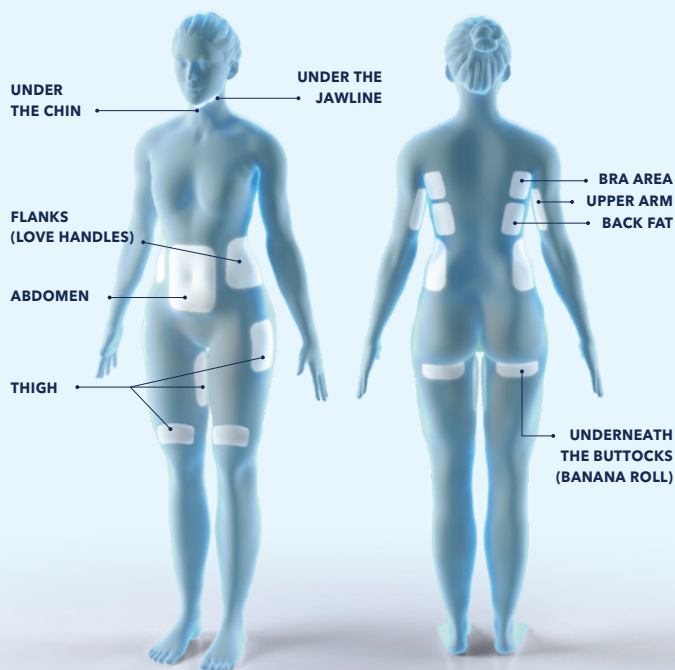

These procedures are not for everyone. You should not be treated with **CoolSculpting[®]** or **CoolSculpting[®] Elite** if you suffer from cryoglobulinemia, cold agglutinin disease, or paroxysmal cold hemoglobinuria.

Please see additional Important Safety Information throughout.

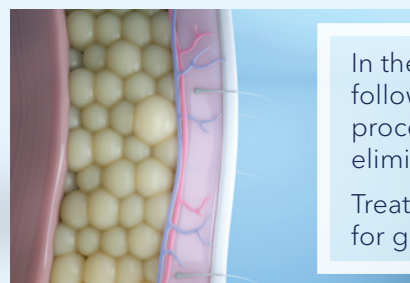

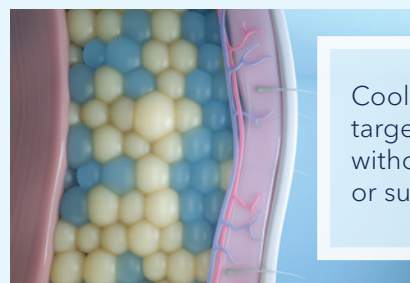

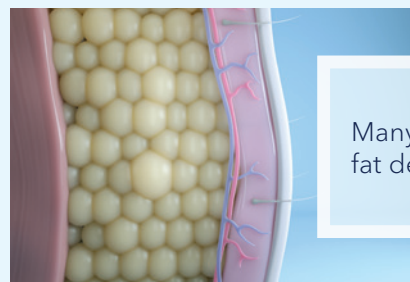

HOW COOLSCULPTING® *works*

Cryolipolysis, otherwise known as fat freezing, has been clinically proven to be safe and effective.

CoolSculpting is the one and only treatment FDA-cleared to eliminate fat in **9 different areas** of the body.

CoolSculpting is an innovative, nonsurgical way to contour your body by safely and effectively freezing stubborn fat away.

Important Safety Information (continued)

Tell your doctor if you have any medical conditions including recent surgery, pre-existing hernia, and any known sensitivities or allergies.

Please see additional Important Safety Information throughout.

REAL PATIENTS. *real results.*

For most patients, two or more treatment visits are recommended to reach their desired results.

88.2%

of patients felt that CoolSculpting®

met or exceeded

their expectations after 2 visits^{1,*}

*In a study in which the primary and additional goals were captured via a 4-item patient-reported outcome survey assessing patient satisfaction with treatment of the abdomen and/or flanks, visible fat reduction, improvement in fit of clothing, and overall effect of treatment (n = 102).¹

Important Safety Information (continued)

Following the procedure, typical side effects include temporary redness, swelling, blanching, bruising, firmness, tingling, stinging, tenderness, cramping, aching, itching, or skin sensitivity, and sensation of fullness in the back of the throat after submental or submandibular area treatment.

Please see additional Important Safety Information throughout.

"After...seeing the results, I thought, 'I should have done this a long time ago!'"

Important Safety Information (continued)

Rare side effects may happen in 1 to 10 out of 10,000 CoolSculpting® and CoolSculpting® Elite treatments (between 0.01% to 0.1%). One such rare side effect is a visible enlargement in the treated area, which may develop 2 to 5 months after treatment, will not resolve on its own, and may require surgical intervention for correction.

Does CoolSculpting® work?

CoolSculpting is FDA-cleared to freeze and eliminate treated fat in 9 areas of the body for good. Since its approval in 2009, more than 13 million treatments have been performed worldwide.⁴ It's no wonder CoolSculpting is the treatment doctors use most for nonsurgical fat reduction.

Is CoolSculpting right for me?

CoolSculpting is a nonsurgical way to contour your body by safely and effectively freezing stubborn fat away. If you have areas of excess and/or stubborn fat, talk to your provider to find out if you are a candidate. Your provider can design a customized CoolSculpting treatment plan to help you achieve your desired results.

How long does CoolSculpting treatment take and how long will it be until I see results?

A CoolSculpting treatment takes as little as 35 to 75 minutes, depending on the area being treated, and treatment visits last an average of 1 to 3 hours. For most patients, 2 or more treatment visits are recommended to achieve their desired results. Most patients see results 12 to 14 weeks after the first treatment visit.

Is CoolSculpting safe?

CoolSculpting has been FDA-cleared for more than 12 years, and the technology is supported by over 100 peer-reviewed publications—more than any other noninvasive fat reduction treatment.⁵ Like all treatments, careful attention must be paid to any adverse events. Paradoxical hyperplasia (PH) is a rare^{6,*} adverse event with a current reported rate of about 1 out of 3000 treatments, or 0.033%. **15**
